Final Hands-On Exam | Mini Capstone

KickOff

Football Training Session Management System for youth clubs

Presented by John Crismel Boligao, Developer

The club's problem and our goals

Today

Training schedules, drills and player sign-ups are handled by hand, so coaches lose track of who is attending which session.

Goals

One place to plan sessions, manage drills, teams and venues, and approve player registrations and attendance.

Three roles, one system

Admin

Manages users, roles, teams and active state. Sees system-wide dashboard metrics.

Coach

Creates sessions, manages drills and venues, approves or rejects registrations, records attendance.

Player

Browses and searches sessions, signs up, cancels a pending signup, follows status updates.

How it works

React app
Vite, Router, Axios.
What users see.

[icon: arrow-right]

Laravel 12 API
Sanctum tokens,
roles, validation.

[icon: arrow-right]

MySQL
Teams, venues, drills,
sessions,
registrations.

Seeded with 4 teams, 3 venues, 24 players, 15 drills, 25 sessions and 100 registrations.

Live walkthrough scenario

1. A player registers, logs in and searches for a session
2. The player signs up for it
3. The coach approves the registration and records attendance
4. The admin reviews users and the dashboard
5. Validation messages and delete confirmation shown on screen

Handover

Item	Where
Source code	github.com/johncrismelboligao-sketch/DC4_BoligaoMiniCapstone
Install and run	README: composer install, php artisan migrate --seed, npm install, npm run dev
Demo accounts	admin, coach and player (README)
API documentation	docs/postman_collection.json
Security	Sanctum tokens; roles enforced in React and Laravel

Delivered, limits and Phase 2

Delivered
Token auth, three roles, session CRUD, search and pagination, registration workflow, dashboard, Postman collection.

Limitations
[Add your known limitations]

Phase 2
Email reminders, attendance reports in CSV or PDF, dashboard charts, player progress notes.
