KickOff: Football Training Session Management System

Developer: [Your Name] | **Course:** React Fundamentals with Laravel as Backend | **Checkpoint:** CP1 (Day 2)

1. Project Title and Client

Project title: KickOff – Football Training Session Management System

Client: Clarin Youth Football Academy (a community football academy with about 80 players, 6 coaches, 4 age-group teams, and 2 training fields). *Replace with your actual client if you have a different one in mind.*

2. Problem Statement

The academy currently manages training with group chats, paper attendance sheets, and a shared spreadsheet. This causes several problems:

- Coaches double-book fields because there is no single schedule.
- Players and parents do not know the latest session time, venue, or cancellations.
- Attendance is written on paper and is often lost, so coaches cannot see who is attending regularly.
- Drill plans live in coaches' notebooks and are not reused or shared.
- The manager cannot quickly see how many sessions were held, how many players joined, or which requests are pending.

KickOff gives the academy one system to schedule sessions, assign fields and drills, let players sign up, record attendance, and view summaries.

3. User Roles

Role	What they can do
Admin (academy manager)	Full control. Manage users, teams, venues, and drills. Create, edit, and delete any session. Approve or reject registrations. Change session status. View the full dashboard.
Coach	Create and edit own training sessions. Attach drills to sessions. Approve or reject player registrations for own sessions. Mark attendance. Mark sessions as completed or cancelled. View dashboard for own sessions.
Player	Register and update own profile. Browse and search upcoming sessions. Request to join a session and cancel own pending request. See

Role	What they can do
	own registration status and attendance history.

4. Main Entities (besides users)

1. **teams**: age-group teams (e.g., U12, U15). One team has many players.
2. **venues**: training fields. One venue hosts many sessions.
3. **training_sessions**: scheduled sessions. Belongs to a coach, venue, and team.
4. **drills**: reusable exercises (name, category, duration, description).
5. **drill_training_session** (pivot): many-to-many between sessions and drills, with order and minutes.
6. **registrations**: players' sign-ups for sessions (many-to-many between users and sessions), with a status and attendance flag.

Relationships:

- Team has many Users (players); User belongs to Team.
- Venue has many TrainingSessions.
- Coach (User) has many TrainingSessions.
- Team has many TrainingSessions.
- TrainingSession belongs to many Drills.
- TrainingSession belongs to many Users (players) through registrations.

5. Planned Features Mapped to Requirements

#	Required feature	How KickOff meets it
1	Authentication (Sanctum)	Register, login, logout, and `GET /api/user`. Token stored in localStorage and sent as a Bearer header via an Axios interceptor.
2	Role-based access	Roles: admin, coach, player. Menu items and routes are hidden in React by role. Laravel `role` middleware and Policies return 403 for unauthorized actions.
3	Full CRUD on two related resources	**Training sessions** (belongs to venue, team, coach) and **Drills** (many-to-many with sessions). Admin also has CRUD for venues and teams.

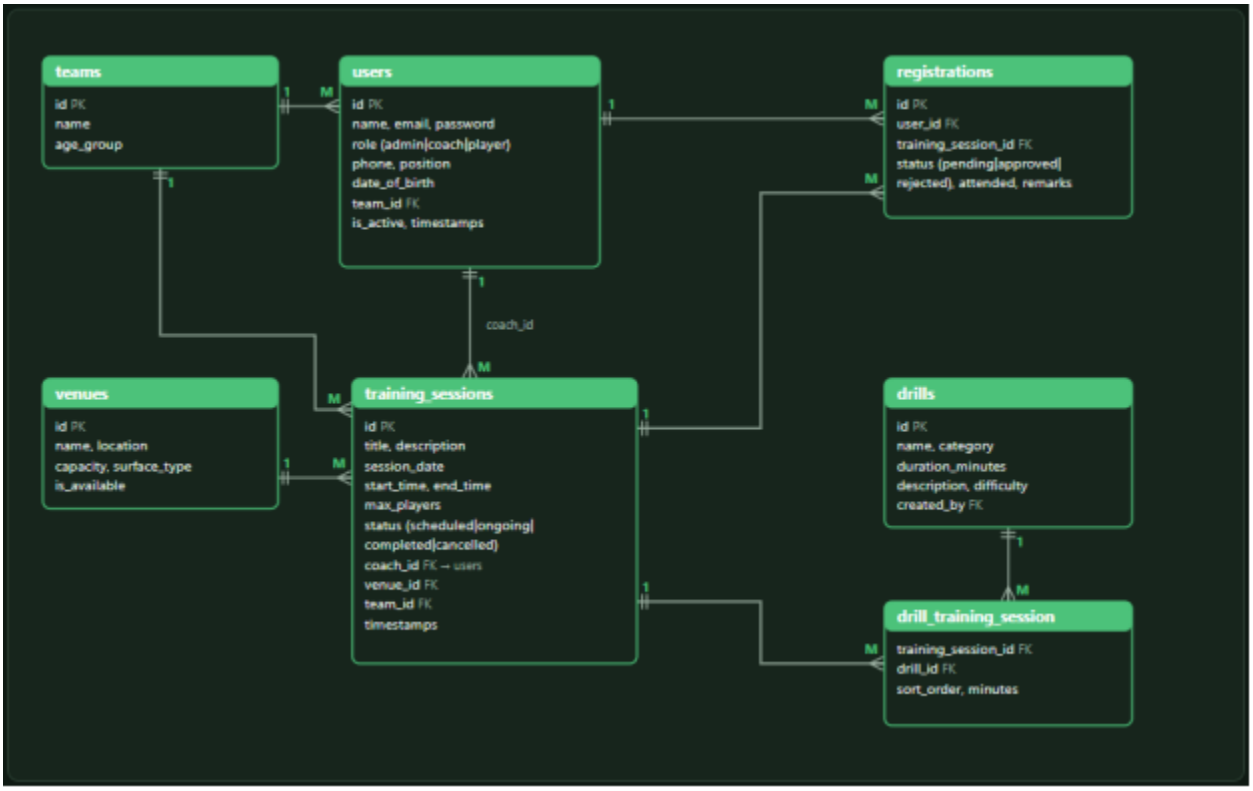

#	Required feature	How KickOff meets it
4	Search and filter	Sessions: keyword search on title, filter by status, team, venue, and date. Drills: search by name, filter by category.
5	Pagination	`paginate(10)` on sessions, drills, registrations, and users. React shows page controls.
6	Dashboard (3+ figures)	Total sessions this week, pending registrations, active players, session completion rate, and upcoming sessions (bonus: chart of attendance per week).
7	Validation on both sides	React forms check required fields, date in the future, and end time after start time. Laravel Form Requests return 422 and errors appear under each field.
8	User feedback	Loading spinners, success and error toasts, and a confirm modal before delete or cancel.
9	Status workflow	**Registration:** Pending → Approved / Rejected → Attended / Absent (by coach or admin). **Session:** Scheduled → Ongoing → Completed or Cancelled (by coach or admin).

6. Planned API Endpoints

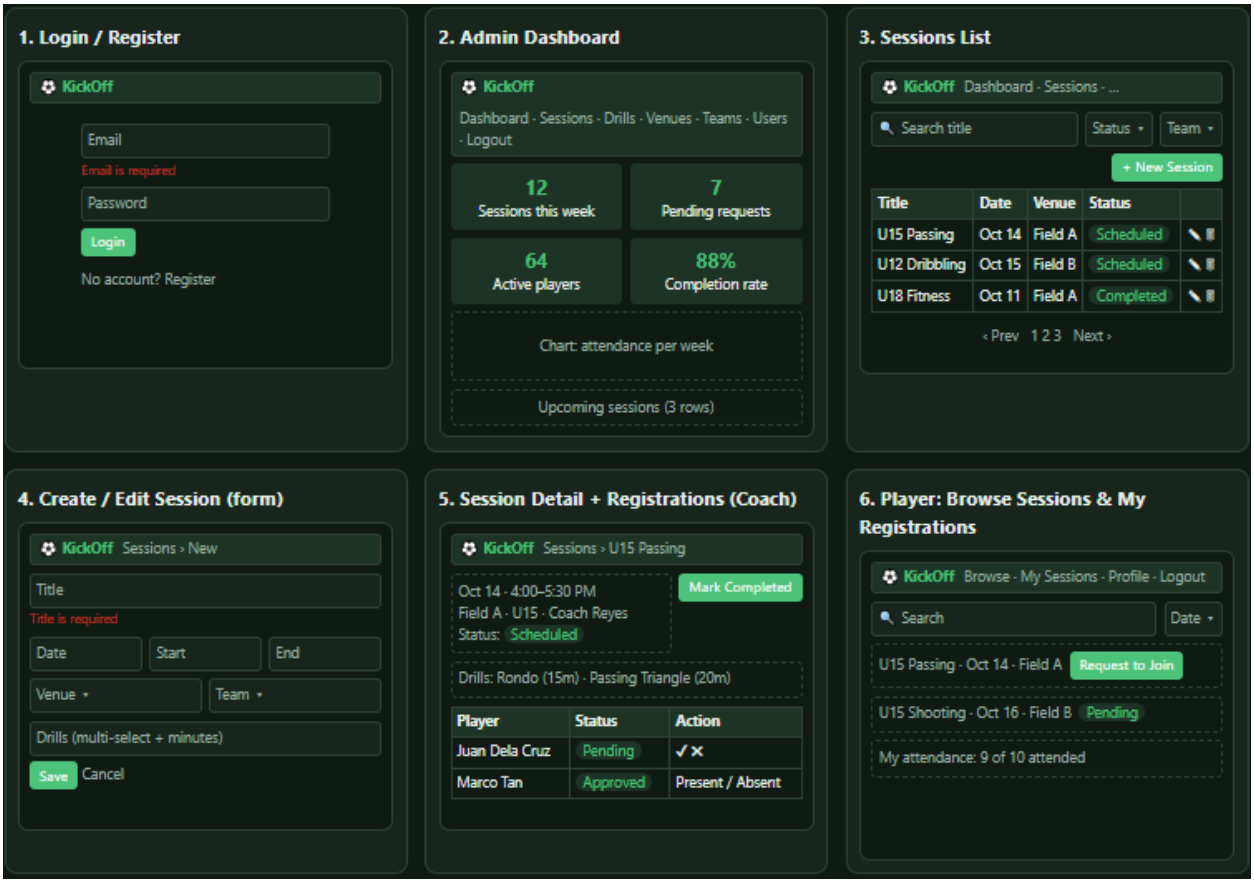

Method	Endpoint	Access
POST	/api/register, /api/login	Public
POST	/api/logout	Auth
GET	/api/user	Auth
GET	/api/sessions?search=&status=&team_id=&page=	Auth

Method	Endpoint	Access
POST	/api/sessions	Coach / Admin
GET	/api/sessions/{id}	Auth
PUT	/api/sessions/{id}	Owner coach / Admin
DELETE	/api/sessions/{id}	Admin
PATCH	/api/sessions/{id}/status	Coach / Admin
POST	/api/sessions/{id}/register	Player
PATCH	/api/registrations/{id}/status	Coach / Admin
PATCH	/api/registrations/{id}/attendance	Coach / Admin
apiResource	/api/drills, /api/venues, /api/teams	Auth (write: Coach / Admin)
GET	/api/dashboard	Auth
